# CapEx<sub>dx</sub>

Database of the Life Cycle of New Investments  
CapEx Data eXtraction for Academia.

## CapEx<sub>dx</sub> is specially designed for academia

CapEx is a database of the progress in implementation of new capacity building projects in India.

This unique database tracks projects from their announcement through their implementation and final closure. The closure could be completion or the abandonment of the projects. CapEx tracks the complete life cycle of projects.

The CapEx database contains the history of implementation of projects since 1995. Over 50,000 projects have been tracked. Many of these have been completed and many others are still in their implementation stages.

Projects include those for infrastructure, manufacturing or even services. These could be implemented by government, private sector companies or foreign companies.

CapEx<sub>dx</sub> is a service that enables researchers to extract all data of selected projects into simple text files. Each selection, the service delivers six separate files that contain all the data for the selected project.
